| <b>Attendees</b><br>Sneha Patil<br>Neha Joshi<br>Arjun Nair                                                                                                                                                                                                                                                                                                                     | <b>Agenda</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Absentees</b><br>-                                                                                                                                                                                                                                                                                                                                                           | <b>Discussion</b><br>* Understanding challenges with current data management * Designing a centralized dashboard for better visibility * Defining specific features and functionalities * The team discussed the goal of creating a centralized dashboard to track business performance. * Sneha explained that the current data is scattered across multiple Excel files, making it difficult to get a clear view of sales and performance. * The team decided to create a dashboard with the following features: + Total sales and sales change over time (monthly and daily) + Sales breakdowns by store and product category + Profit calculation based on selling price and cost price + Employee performance ranking based on total sales generated + Comparisons like month-over-month performance + Filters for date, store, and product category with interactive charts * The team also discussed data quality issues, including missing values in some files, and agreed to handle data cleaning. * The design preference was for simple and easy-to-understand visuals, using clear KPICards, trend charts, and comparison visuals. |
| <b>Icebreaker</b><br>-                                                                                                                                                                                                                                                                                                                                                          | <b>Shoutouts</b><br>-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Action Items</b><br>1. Receive Sneha's data sets (sales, employee, product, and store) and connect them to build relationships between the datasets. 2. Design the dashboard with the agreed-upon features and functionalities. 3. Implement restricted access based on roles for managers and other users. 4. Handle data cleaning to address missing values in some files. | <b>Parking Lot</b><br>-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
