Meeting Title: AI Generated Meeting

Date & Time: Auto Generated

Location: Virtual

Attendees Neha Joshi Sneha Patil Arjun Nair	Agenda * Discuss requirements for a business performance dashboard * Identify challenges and goals for the project
Absentees -	Discussion 1. Introduction and understanding of requirements: * The goal is to create a centralized dashboard for better visibility into sales and performance. 2. Sales tracking: * Total sales and changes over time (monthly and daily) will be tracked. * Sales breakdowns by store and product category are desired. 3. Profit calculation: * Profit is the difference between selling price and cost price. * Both values are available in product data, which will be used to calculate profit and profit percentage. 4. Employee performance tracking: * Top-performing employees will be defined based on total sales generated by each employee. * No, a number of orders will not be considered.
Icebreaker -	Shoutouts -
Action Items * Filters for date, store, and product category are desired. * Clicking on charts should also filter other visuals. 6. Data sets and quality: * The following data sets exist: sales data, employee data, product data, and store data. * Some files may have missing values, which will be handled through data cleaning. 7. Access control: * Only managers should have full access to the dashboard; restricted access based on roles will be implemented. 8. Visual preferences: * Simple and easy-to-understand visuals are preferred. 1. Receive Sneha's data sets and proceed with building the dashboard. 2. Design the dashboard with clear KPICards, trend charts, and comparison visuals. 3. Implement restricted access based on roles. 4. Handle data cleaning for missing values in some files.	Parking Lot -
